EDUCATION

Bachelor of Arts in Economics
Florida International University
2012 – 2016

SUMMARY

I am a self-motivated, self-taught developer who likes to solve problems and adept at contributing to highly collaborative work environments. My repertoire includes programming languages and tools such as Java, Python, Spring, MySQL, AWS, and more.

EXPERIENCE

VA Teacher

The League of Amazing Programmers / San Diego, CA / February 2020 - present

Teach students on the fundamentals of programming with an active learning approach to create a collaborative environment and convey the theories as they learn by coding.

- Develop confidence and a growth mindset to students to overcome problems by breaking down and solving smaller parts of the problem
- Build small projects using Java and Processing such as a discord bot to automate responses

Java Developer Trainee

FDM Group / New York, NY / June 2019 - February 2020

Developed and designed web-based apps as part of a scrum team of 8 in FDM's full stack Java web development course.

- Decoupled CRUD methods into a generic data access object that persist objects of any type through Hibernate
- Applied DAO's benefits of type safety offered by Java while fully utilizing the benefits of Spring's dependency management

Corporate Finance Solutions

Santander Private Bank / Miami, FL / December 2016 – June 2019

Supported the bankers in the preparation of proposals for secure lending and structure lending with the collaboration from legal and risk department at Santander.

- Analyzed our client's portfolio using Oracle and Bloomberg to quantify the market value and evaluate their lending value
- Created a search engine within Excel using VBA to search for information relating banker's info thru our pipeline to identify possible corporate opportunities and solutions
